## Online chemistry tutor organic tests

What is Clutch Prep? Clutch Prep is an online tutoring platform that has videos, questions, and exam reviews specific to your class. Think of it as having a world-class private tutor in your corner, but at a fraction of the cost. Does Clutch Prep replace my textbook? Our video lessons and practice exams are meant to be used as a supplement to support the specific material you go over in class. This means that often students use Clutch Prep as a replacement for their textbook. How does my tutor know what I'm covering in class? Where many platforms fail to provide relevance beyond the subject you're taking, Clutch Prep is personalized to your specific class. Our tutors meticulously review tens of thousands of syllabi and class notes each semester to ensure you only learn what you need to learn. Is Clutch Prep cheating? No, Professors love us. Seriously, over 100 Professors use Clutch in their classroom! We don't do shallow explanations & we won't just show you all the answers to your homework. Also, we do not and will not share your data. Is Clutch Prep Free? It's completely free to create an account and start learning. If you end up subscribing to Clutch for the semester for unlimited access but it doesn't work for your studying style or you don't improve your exam grade we'll refund you. With plans starting from only \$14.99 a month, Clutch Prep is saving students hundreds of dollars on private tutoring and textbook expenses. Clutch Prep vs Chegg, what's the difference? Two completely different products! If you primarily need help with homework, you are going to be better off with Chegg as they have the largest library of problems on the web. If you need help understanding your course material/textbook and increasing your exam grade then that's where we're really Clutch. In this blog post I summarise all the organic tests required for A Level Chemistry. If you have not already done so, you should read my previous post and ensure that you are familiar with the chemical tests listed here. Mechanisms for some of the reactions listed below can be found here. Test for alkenes Alkenes will react with bromine water to form a halogenoalkane. Bromine water is orange but the halogenoalkane formed will be colourless. Test for carboxylic acids Carboxylic acids will react with metal carbonates to produce a salt, water and carbon dioxide. Sodium carbonate is as good a choice as any. Effervescence will indicate the production of a gas and bubbling it through limewater will confirm that the gas is carbon dioxide. Test for halogenoalkanes The presence of a halogenoalkane (except fluoroalkanes) can be confirmed by first carrying out a nucleophilic substitution reaction with aqueous sodium hydroxide solution. A small quantity of ethanol is also required to dissolve the haloalkane. Gentle heating will produce an alcohol and liberate halide ions. The halide ions can be detected using nitric acid followed by silver nitrate. Chloride ions will produce a white precipitate, bromide a cream precipitate and iodide produces a yellow precipitate. It is very important that any unreacted hydroxide ions are removed completely to give a neutral or acidic solution as silver hydroxide will also produce a precipitate. Test for aldehydes The A Level syllabus requires candidates to be able to carry out a chemical test to distinguish an aldehyde from a ketone. There are two chemical tests that will give a positive test for an aldehyde but not a ketone. Fehling's solution (a mixture of solutions of copper sulphate and sodium hydroxide) is a blue solution which when gently heated with an aldehyde forms a red precipitate of copper(I) oxide. Ketones do not undergo a visible change. Tollens' reagent (known as ammoniacal silver nitrate) when heated with aldehydes in a boiling tube forms a silver mirror on the inside of the tube. Ketones do not undergo a visible change. Test for alcohols Alcohols are classified as being primary, secondary or tertiary depending upon how many alkyl or aryl groups (commonly known as "R" groups) are attached to the carbon atom that is attached to the hydroxy group. A Level Chemistry students are required to distinguish between primary, secondary and tertiary alcohols. The oxidising agent potassium dichromate dissolved in dilute sulphuric acid will oxidise primary and secondary alcohols but not tertiary alcohols. The alcohol is mixed with a small quantity of potassium dichromate and sulphuric acid in a pear shaped flask. The mixture is heated gently followed by immediate distillation of the product. If the potassium dichromate solution changes colour from orange to green then an oxidation reaction has taken place with a primary or secondary alcohol. If no colour change is observed then the alcohol was a tertiary alcohol. A primary alcohol will form an aldehyde and a secondary alcohol will form a ketone. Tollens' reagent or Fehling's solution can then be used to determine if the initial alcohol was primary or secondary. Summary of tests The table below summarises all the tests and the chemical reactions that take place. Individual Question Analysis & Explanations Percentile Rankings Score versus Time Distribution Time Spent Per Question Edward Certified Tutor CUNY City College, Bachelor of Science, Biotechnology. Lauren Certified Tutor Chadwick University, Bachelor of Science, Business Administration and Management. Chadwick University, Master of Science, Bus... Melissa Certified Tutor University of Wisconsin-Oshkosh, Bachelor in Arts, Journalism. If those strange equations a chemistry teacher writes on a chalkboard drive you crazy, there's no need in torturing yourself. Thanks to the digital and technological progress, you can find a chemistry problem solver for any occasion. Here are some you can use. Top 10 Chemistry Homework Help Apps This app is designed for both iPhone and iPad 0.99 USD This app is designed for both iPhone and iPad free This app is designed for both iPhone and iPad free Title Best For Price StudyBlue This is an app that can be used on both iOS and Android devices. It is a studying app that is very helpful for students because it is a student-created and student-run app. It helps students study with 100% original content that is written by students. It is a very interactive app that is easy to use. Title Best For Price Quizlet This is a very interactive app that helps students study for their tests. It not only helps students study for their tests, but it also helps them study for their quizzes, tests, and exams because it is so interactive. It is a very well-rounded app because it helps students study for so many subjects. Title Best For Price Khan Academy This app is very helpful for students that are working on their math. It helps students understand math and math problems that they may have trouble with. It has over 3,000 videos that students can watch and help them understand math. It has over 1,000 practice problems and exercises for students to do. It is very interactive and easy to use. Title Best For Price FlashCards+ This app is very helpful for students because it helps them study for their exams in an interactive and fun way. It helps students study for their tests, quizzes, and exams in a fun and interactive way. It has over 1,000 flash card sets that are free to use. It has over 100,000 flash cards that students can use to study for their tests. Title Best For Price eNotes This is an app that can be used on both iOS and Android devices. It is a study tool that helps students with their homework, and it is very helpful. It has a study guide that is based on the textbook, and it is very helpful for students. It has a dictionary that is very easy to use and navigate. It also has a glossary that is very helpful for students. Chemistry Problem Solver for All Chemistry Students When you need to calculate molar mass or to balance a chemical equation, you can count on the chemistry problem solver to help you out. This tool is quite comprehensive. It is useful for any student regardless of the type and level of the chemistry course which he or she is taking. If you find things difficult to understand, the problem solver will help you with the learning process. If you are experienced and skilled, it will allow you to save a massive amount of time while doing your homework. The tool is quite intuitive and very easy to use. Chemistry Homework Help to Get Good Grades Chemistry is a branch of science that teaches students how substances behave and react with each other. It is a very interesting subject that enhances knowledge of the students about elements and the principles governing these elements. But same chemistry proves tough for many students who cannot remember the formulae and equations that are necessary in understanding the subject. It is a fact that students are required to memorize lots of formulae and properties of substances and gases besides remembering how they react with other substances and gases. It is this knowledge that comes handy while finding answers to chemistry homework given by teachers at school. For such students who dread chemistry, specially the formulae of this subject, it becomes essential to arrange chemistry homework help to be able to complete their assignments. You really need help if you have not memorized symbols and values If you happen to be one of the thousands of students who fear chemistry because of the names, symbols, and formulae that you have to memorize to be able to solve problems, you are in luck. You can now receive chemistry homework help sitting at home and that too with just a few clicks of your computer. Yes, there are many portals providing chemistry homework answers to students who cannot do their assignments given to them by their teachers at school. Of course you pay a little amount of money for such service but imagine the comfort and convenience associated with such a service. Stay away from free online resources If you are interested in chemistry problem solver but find it hard to memorize the symbols, valencies, properties, and characteristics of various substances, the best course of action for you is to register yourself with a website or online tutor that can solve your problems at a short notice. Though there are also tutors and websites that provide chemistry homework help free, you are better off with websites that charge a small fee for their service. This is because you can find yourself stuck at a crucial time and do not receive a reply to the problem posted by you in the case of a free service. This can upset your calculations and bring your grades down at the final exam. To avoid all this and to receive fast and efficient help with chemistry homework, select online help wisely. There are some websites that have hired the services of the best available talent in the subject of chemistry. These experts remain at the disposal of the website and answer the questions posted by registered students at a short notice. You need to make sure from the reviews of these websites about the efficiency of the chemistry homework solver. Many websites claim to have cracked questions from hundreds of textbooks in chemistry. You need to shortlist a company with the best feedback from the students. If you do some research before finalizing the online help, you will never have to worry 'how to do my chemistry homework' at home without assign for help from parents and siblings.
